

Principal Member of Technical Staff

[Apply Now](#)

Company: Oracle

Location: Spain

Category: production

Building off our Cloud momentum, Oracle has formed a new organization - Oracle Health Applications & Infrastructure. This team focuses on product development and product strategy for Oracle Health, while building out a complete platform supporting modernized, automated healthcare. This is a net new line of business, constructed with an entrepreneurial spirit that promotes an energetic and creative environment. We are unencumbered and will need your contribution to make it a world class engineering center with the focus on excellence. At Oracle Health, our mission is to improve healthcare and quality of life globally through better experience and easier access to health and research data for patients and healthcare providers.

We are looking for hands-on engineers with expertise and passion in solving difficult problems in all areas of software engineering: distributed systems, identity, security, observability, and user experience.

This is a greenfield opportunity to design and build new cloud centric applications from the ground up. We are growing fast, still at an early stage, and working on ambitious new initiatives. An engineer at any level can have significant technical and business impact here. You will be part of a team of smart, motivated, diverse people, and given the autonomy as well as support to do your best work. It is a dynamic and flexible workplace where you'll belong and be encouraged.

We offer unique opportunities for innovative, hands-on engineers with the expertise and passion to tackle difficult problems in distributed, highly available services and virtualized infrastructure. At every level, our engineers have a significant technical and business

impact designing and building innovative new systems to power our customer's business critical applications.

Want to build extraordinary things in a vibrant, high-energy team? Are you an expert developer looking for an opportunity to have more technical impact? We are looking for a Principal Engineer with distributed systems experience to join the Identity organization. There is tremendous opportunity to be given very large scope and responsibility in a very dynamic environment.

You are technically strong and get a lot done – you've built services from scratch that are highly available, scalable, and redundant. You understand that simple systems are easier to operate and tackle. You can balance speed with iteration and incremental improvements. You've made life easier for other developers and have motivated your teams to make both process and service improvements.

The growth of the business is driving us to improve the ability of our systems to scale out and handle traffic patterns that are several orders of magnitude greater than what we can support today. We need engineers who can build services to handle millions of requests per second and can determine how we can survive regional data center outages. We need engineers who can build services that enable us to offer even more options to customers. Is that engineer you?

You will have part in the disruption of the health care industry and will help deliver better patient care.

These are exciting times in our space - we are growing fast, still at an early stage, and working on ambitious new initiatives!

Qualifications

- 5+ years in Cloud engineering infrastructure development
- Hands-on experience building and operating highly-available, high-traffic web services
- Experience developing customer facing architectures and restful web services
- Development experience in Java, C++, C#, and/or .NET as well as scripting languages
- Deep understanding of object-oriented design and SDK development, specifically within a cloud environment
- Experience working with other cloud teams and accommodating requirements from those teams (compute, networking, search, storage)
- Experience in a collaborative, agile development environment.

Preferred Qualifications

- Experience and understanding of multi-AD/AZ and regional data centers
- FedRAMP, PCI DSS, or similar compliance and auditing experience
- Experience and detailed technical knowledge in PaaS engineering.
- Expertise in applying threat modeling or other risk identification techniques to develop security solutions

Oracle is an Equal Employment Opportunity Employer. All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, national origin, sexual orientation, gender identity, disability and protected veterans status or any other characteristic protected by law

Career Level - IC4

The role

We are looking for engineers with **distributed systems experience**, who have worked on **highly available, scalable, and redundant services**.

You will design major features and launch them into production.

You'll operate and support high-scale services and understand how to make them more resilient.

You understand that simple systems are easier to operate and fix.

You can balance speed and quality with iteration and incremental improvements.

You've made life easier for other developers and have motivated your teams to make both process and service improvements with your ability to automate and instrument properly to get the right data.

You understand operational excellence and how to instill a culture of being dedicated with your teammates.

What are the biggest challenges for the team? Scalability, performance and availability.
