Company: Oracle

Location: Spain

Category: computer-and-mathematical

Location: Spain - the role is remote but you may be asked to go to the office 1 day if close.

Oracle Health Mission Statement

Building off our Cloud momentum, Oracle has formed a new organization - Oracle Health Applications & Infrastructure. This team focuses on product development and product strategy for Oracle Health, while building out a complete platform supporting modernized, automated healthcare. This is a net new line of business, constructed with an entrepreneurial spirit that promotes an energetic and creative environment. We are unencumbered and will need your contribution to make it a world-class engineering center with the focus on excellence.

At Oracle Health, our mission is to improve healthcare and quality of life globally through better experience and easier access to health and research data for patients and healthcare providers. Oracle Health is putting humans at the heart of the conversation and what the healthcare experience needs to look like – for patients, providers, payers, and the population. We will facilitate this by advancing the state of the art in healthcare and population level health, make it practical, effective, and real at practitioner level by connecting everything together. This will allow a patient to get point of care from anyone, anywhere or any device by providing the practitioner medical information leveraging global data.

About the team

Within the Oracle Health portfolio, is a leading EHR platform with an installed base in 36 countries and more than 400K users every day. The Interoperability team focuses on

creating a robust API platform for , based on the Fast Healthcare Interoperability Resources (FHIR) standard.

We help Oracle meet regulatory requirements unique to each customer geography. We support innovators working on some of toughest challenges providers face today in health care. We also participate in working groups pushing the evolution of the standard's definitions.

You will be part of a team of smart, motivated, diverse people, and given the autonomy as well as support to do your best work. We work in a highly collaborative environment that stretches across multiple development offices across Europe. It is a dynamic and flexible workplace where you'll belong and be encouraged.

Who are we looking for?

We are seeking back-end engineers to join the Interoperability team, to help advance the platform. As a Senior Software Engineer on our team, you should have experience with the design of major product features and launching them into production.

You are used to working on most projects and tasks independently, you are technically strong and get a lot done across the full software development lifecycle: designing, writing, testing, and reviewing code. You understand that simple systems are easier to operate and fix. You've made life easier for other developers and have motivated your teams to make process improvements.

We believe in ownership and expect you to advance our engineering practices, development process and knowledge sharing and mentoring initiatives. You will make sure that Oracle Health requirements for quality, maintainability and documentation are met, and understand the value of iteration and incremental improvements.

You will work in accordance with corporate and organizational security policies and procedures, understand personal role in safeguarding corporate and client assets, and take appropriate action to prevent and report any compromises of security within scope of position.

Minimum Qualifications

4+ years of industry experience.

BSc or MSc degree in CS or equivalent domain specific experience.

Experience with automated testing frameworks.

High level of fluency with Java.

Experience building and maintaining RESTful APIs.

Fluent in English.

Able to effectively communicate technical ideas verbally and in writing (technical proposals, design specs, architecture diagrams) to multiple stakeholders and audience types.

Knowledge of software engineering best practices, including agile methodologies, coding standards, code reviews, source management, build processes, testing.

Preferred qualifications

Familiarity with micro-services architecture.

Strong working experience on GitHub/Bitbucket, Jenkins/TeamCity, Maven/Gradle

Experience with components of modern infrastructure like service discovery, secret storage, containerization, etc.

Experience building cloud-based platforms that enable application design like OCI, AWS, Azure

Nice to have

Experience with Health Information Technology.

Experience with any HL7 interfaces, specifically (FHIR).

Experience building control plane/ data plane solutions for cloud native services.

Experience with observability tools.

Experience in diagnosing, troubleshooting and resolving performance issues.

Career Level - IC3
As a member of the software engineering division, you will assist in defining and developing software for tasks associated with the developing, debugging or designing of software applications or operating systems. Provide technical leadership to other software developers. Specify, design and implement modest changes to existing software architecture to meet changing needs.
